Panel sampling across the BV-BRC 16S embedding space

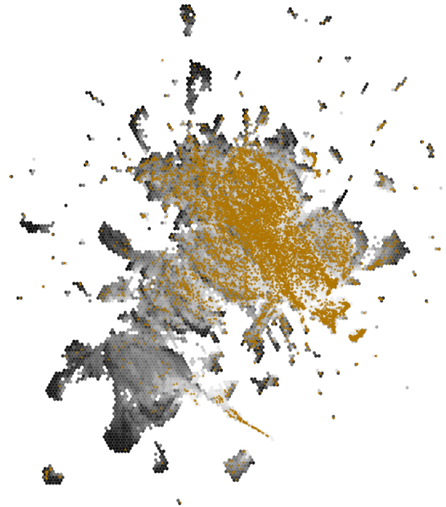

A k-means panel (embedding-uniform)

10,000 picks, one per cluster
all on frame

B original panel (taxonomy-stratified)

9,097 of 10,000 picks on frame
903 off frame (short/atypical 16S or lineage gate)

C random panel (uniform over organisms)

10,000 picks, one per organism
all on frame

D sampling vs local density
